- Linux is technically a **kernel**
 - **Kernel** - core of the operating system

- Many operating systems use the Linux kernel!
 - Ubuntu (what's on the EOS machines)
 - Arch, Kali, Gentoo, Fedora, Manjaro, etc.
- Confusingly, these OS's are often referred to as "Linux"

And now, what is Unix???

And now, what is Unix???

- Unix was an earlier operating system

And now, what is Unix???

- Unix was an earlier operating system
- Linux and other systems are heavily influenced by Unix

And now, what is Unix???

- Unix was an earlier operating system
- Linux and other systems are heavily influenced by Unix
- We now use “Unix-like” to describe systems

And now, what is Unix???

- Unix was an earlier operating system
- Linux and other systems are heavily influenced by Unix
- We now use “Unix-like” to describe systems
 - They follow the same general ideas as Unix

And now, what is Unix???

- Unix was an earlier operating system
- Linux and other systems are heavily influenced by Unix
- We now use “Unix-like” to describe systems
 - They follow the same general ideas as Unix
 - This means most things (commands, properties) carry over!

- Can you do your homework on a Windows machine?
 - Not by default :^(
 - However, we have WSL!
 - **W**indows **S**ubsystem for **L**inux
 - If you are on Windows, you need to install WSL
 - Information on Piazza!

Enough history!
Why the turtles?

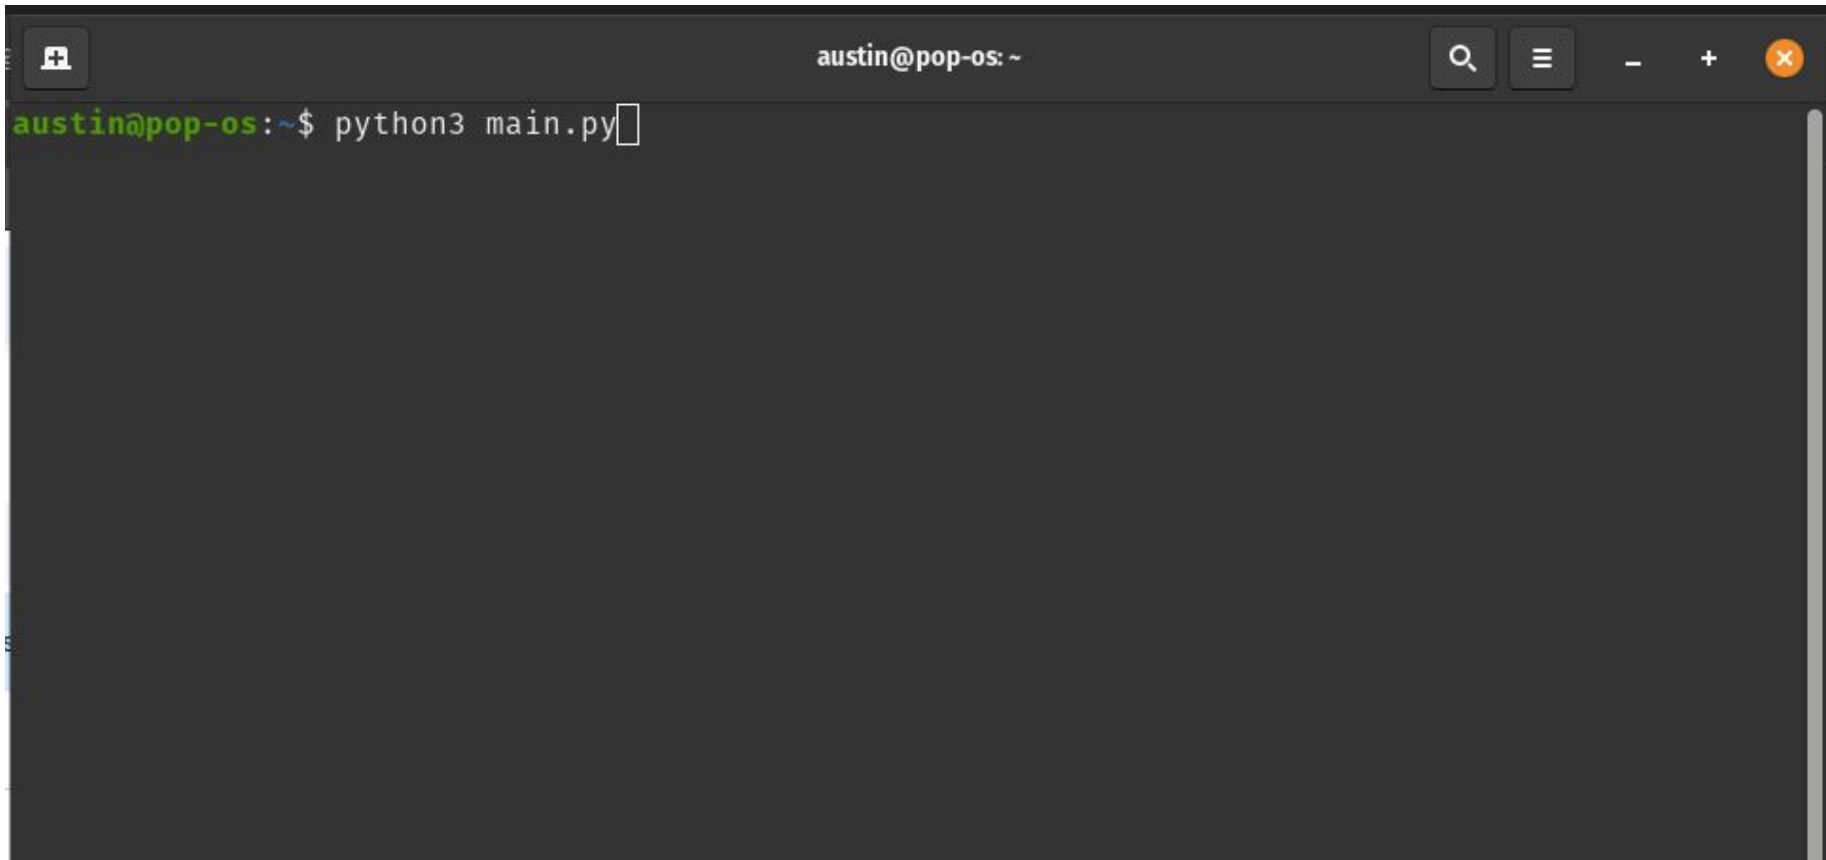

What is this called?

A screenshot of a terminal window with a dark gray background. The window's title bar at the top shows 'austin@pop-os: ~' in the center, a search icon on the left, and standard window control icons (minimize, maximize, close) on the right. The terminal content shows a green prompt 'austin@pop-os:~\$' followed by the command 'python3 main.py' and a white cursor at the end. The window also features a small icon in the top-left corner and a vertical scrollbar on the right side.

```
austin@pop-os: ~  
austin@pop-os:~$ python3 main.py
```

What is this called?

A terminal

But what's going on in here?

A terminal window with a dark gray background. The title bar at the top shows 'austin@pop-os: ~' and standard window controls (search, menu, zoom, close). The prompt 'austin@pop-os:~\$' is followed by the command 'python3 main.py' with a cursor at the end. A red arrow points to the prompt area.

```
austin@pop-os:~$ python3 main.py
```

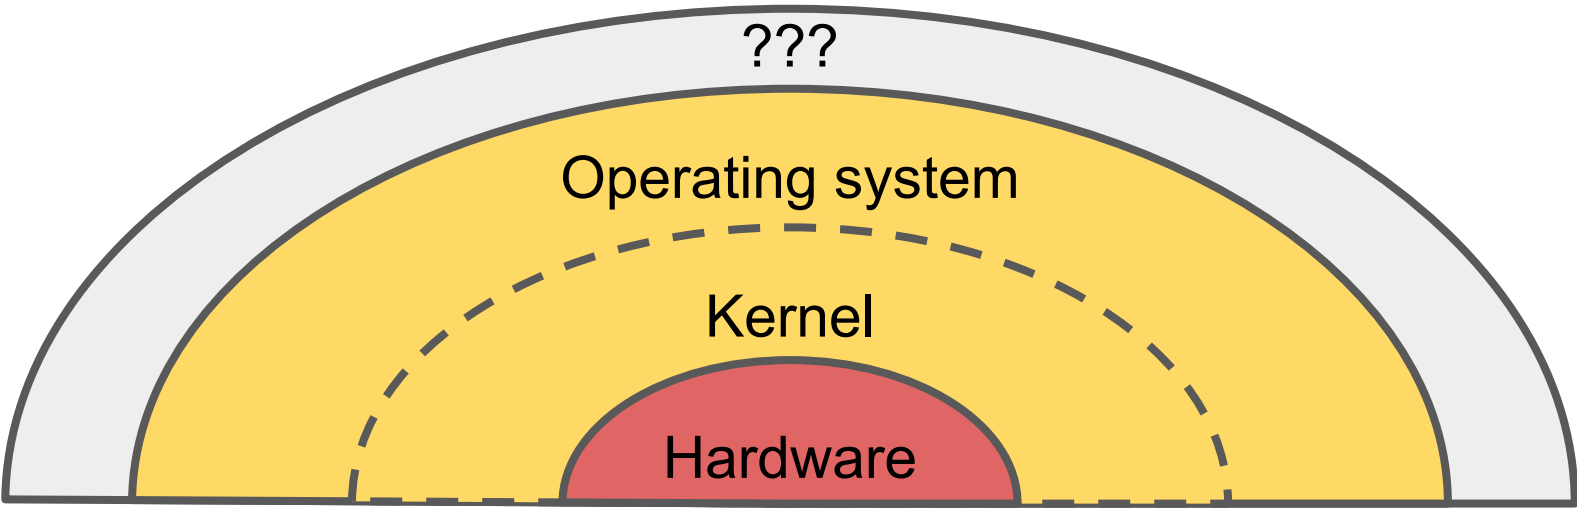

But what's going on in here?

A terminal window with a dark background. The title bar at the top reads "austin@pop-os: ~". On the left of the title bar is a small icon of a person. On the right are standard window controls: a magnifying glass (search), a hamburger menu, a minus sign (zoom out), a plus sign (zoom in), and a red close button. The terminal content shows a green prompt "austin@pop-os:~\$" followed by the command "python3 main.py" and a white cursor. A red arrow points from the top left towards the prompt area.

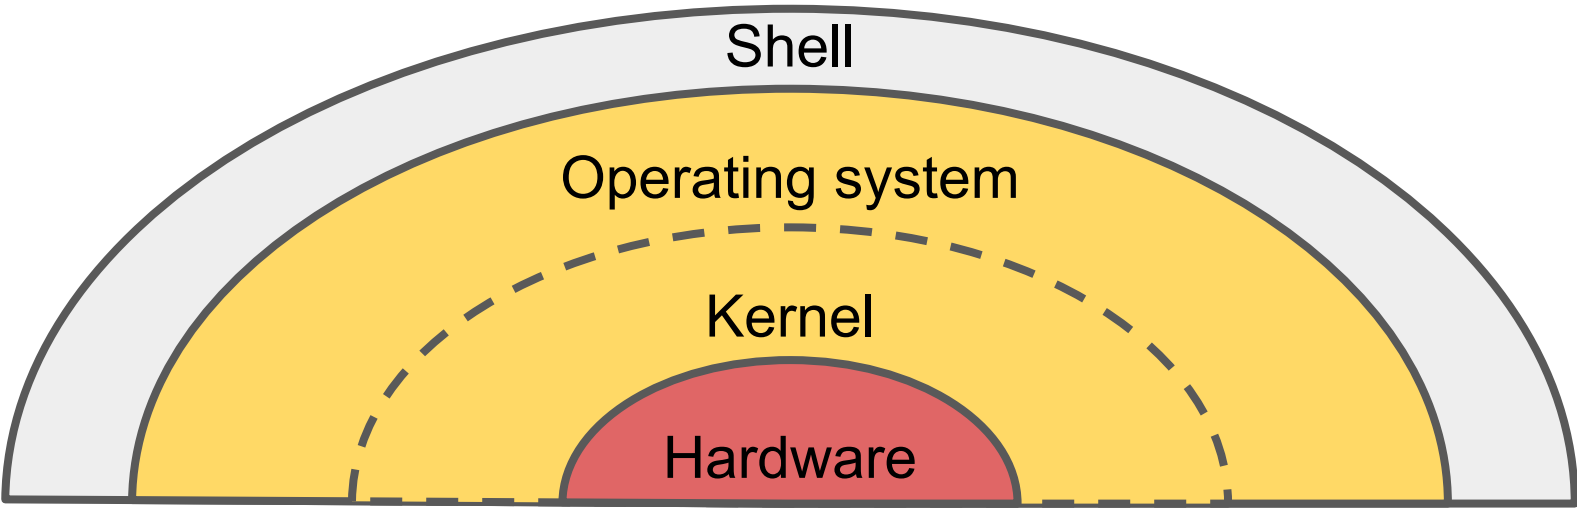

```
austin@pop-os:~$ python3 main.py
```

We are running a ***shell***

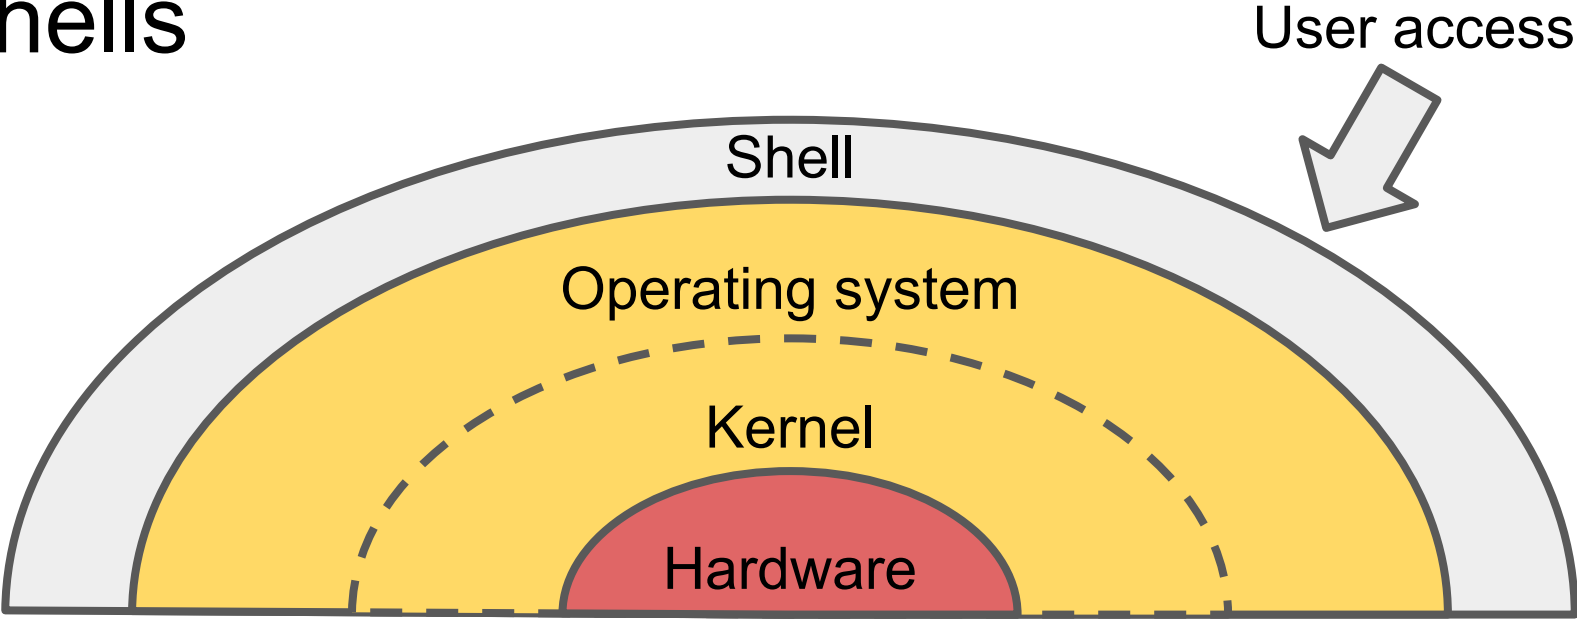

Shells

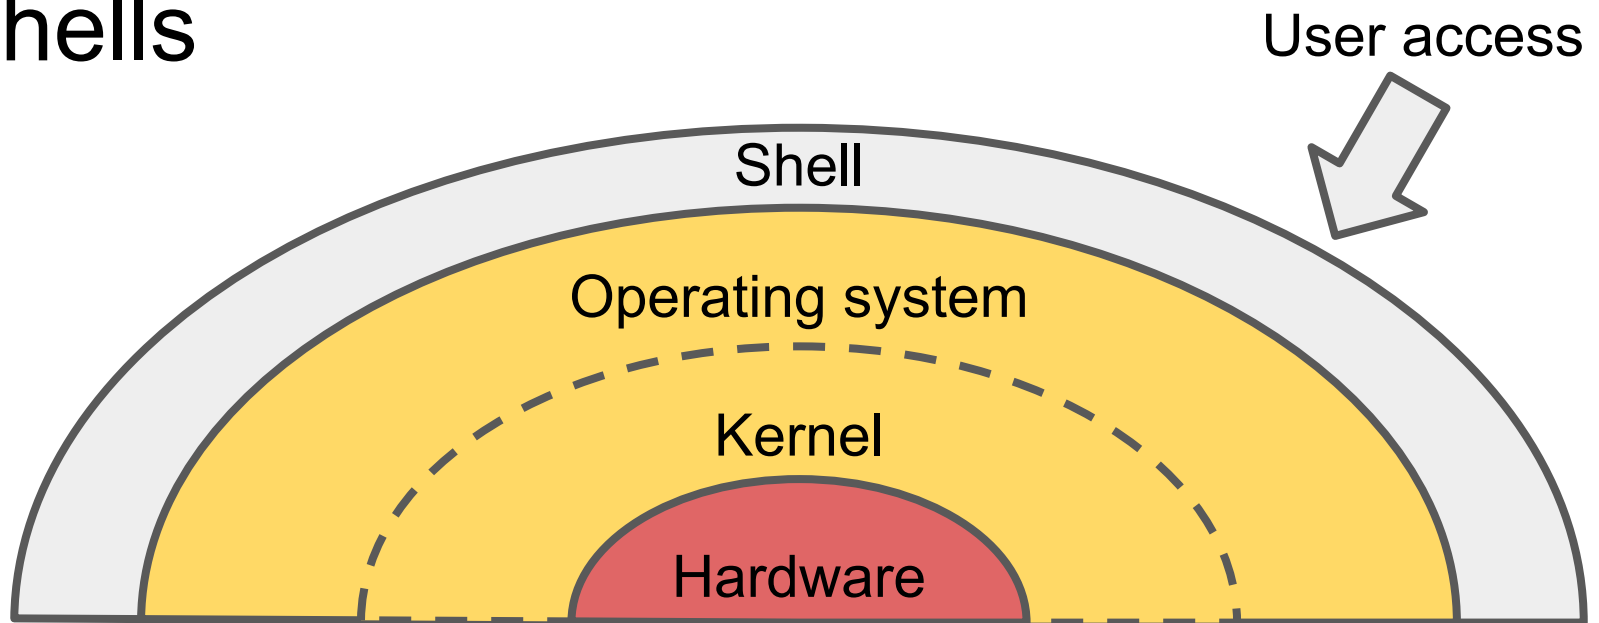

Shells

Shells

Shells

- We can check what shell we're using with `echo $0`

```
austin@pop-os: ~  
austin@pop-os:~$ echo $0  
bash  
austin@pop-os:~$
```

What if I want to connect to another machine?

What if I want to connect to another machine?

ssh - **S**ecure **SH**ell

What if I want to connect to another machine?

ssh - **S**ecure **SH**ell

ssh allows us to securely connect to a remote shell

What if I want to connect to another machine?

ssh - **S**ecure **SH**ell

ssh allows us to securely connect to a remote shell

usage:

```
ssh username@address
```

What if I want to connect to another machine?

ssh - **S**ecure **SH**ell

ssh allows us to securely connect to a remote shell

usage:

```
ssh username@address
```

For connecting to the EOS machines:

```
ssh username@eos01.cis.gvsu.edu
```

What if I want to connect to another machine?

ssh - **S**ecure **S**hell

ssh allows us to securely connect to a remote shell

usage:

```
ssh username@address
```

For connecting to the EOS machines:

```
ssh username@eos01.cis.gvsu.edu
```

You can log onto different machines in the lab by changing this number!

Why would I use a shell or ssh?
